

Audiovector R6 Arreté

LOUDSPEAKER
FLOORSTANDING LOUDSPEAKER

The ultimate version of the upgradable Audiovector R6 high-end floorstanding loudspeaker, the R6 Arreté features the company's own AMT tweeter, cross-woven carbon-fibre/artificial wood resin sandwich mid and bass drivers, a revised solid plinth, and the Freedom Grounding system. Arreté also improves internal damping and even includes a rear-firing midrange driver. These improvements transform the high-end R6 into a four-and-a-half way masterpiece... and one that owners of existing R6 Signature or Avantgarde loudspeakers can upgrade.

Choose wisely

The R6 Arreté demands careful installation and choice of partnering equipment, but it's tall, slimline cabinet makes it surprisingly room-friendly, both in terms of aesthetics and placement. Freedom Grounding is a welcome addition. It aims to reduce movement-induced distortion between drivers by connecting the loudspeaker to the mains earth, resulting in a claimed 3dB reduction in overall distortion.

In our listening test, the Audiovector R6 Arreté makes a powerful musical statement. Its standout feature is the bottom end, which combines bass depth and speed, resulting in a tight and tuneful performance. The loudspeaker also excels in dynamic range and texture, delivering both forceful and subtle details with realism. The loudspeaker is designed for medium-large to large listening rooms, where its exceptional soundstaging properties and tonal accuracy, clarity, and musicality shine through.
